Ceramic Base – Coated vs uncoated

This picture is of the bow of a fiberglass trawler. GT Marine Ceramic Base was applied to the left side and the right side had no coating applied. The trawler operates in Desolation Sound, British Columbia, a waterway that has a very high level of tree sap that easily stains gelcoat. This photograph was taken 1 year after application.

Ceramic Top

- Professional grade ceramic coating
- Marine specific coating
- Can be applied to all marine top coats and gel coats
- Leaves a durable high gloss finish
- When applied over base coat provides durable ultra hydrophobic protection and dust repellency
