## Aquapel Glass Treatment

Aquapel® Glass Treatment repels water from windshields to considerably improve vision when driving in adverse weather conditions. It can also be used on any window where clearer vision is needed. Significantly reduces glare from lights during night driving. Facilitates de-icing and snow removal from the windshield. Easily removes dirt and insects. Aquapel® forms a chemical bond with the glass unlike other products. Therefore, Aquapel® lasts up to 6 times longer than other products. Only one application can last several months.

### Application:

- Wash glass or windshield and press each side of the pad.(Not like a lemon).
- Then use alcohol to better degreasing glass.
- Shake well.
- Apply to half on the windshield and buff with a paper tower to remove completely and apply to the other half and buff it.
- Put another layer with the rest.
- It should not be applied if temperature is below 5°C or above 30°C.
- Do not apply in direct sunlight.
